GTP introduces new cost-effective rapier frame: RPF500

Functional products, enhancing your competitiveness

GTP, the world leader in the design of the most reliable weaving accessories, introduces a new frame for the rapier weaving machines. With the current market situation there is a growing need for cost-effective solutions. Therefore, GTP searched for a reliable though low-cost frame that suits the standard requirements of rapier weaving machines.

The RPF500 is GTP's new cost-effective rapier frame. It is a standard harness frame with a high-strength 120 x 9 mm aluminum profile. The RPF500 design allows both S-connectors and DRC1 driving elements on the frame profile.

This makes the RPF500 a versatile harness frame compatible with most of today's lower speed rapier looms at weaving speeds of maximum 500 rpm. The RPF500 is available in both C and J-shaped heddle execution and for loom widths up to 240 cm.

In addition, the RPF500 frame can be used with any type of automatic drawing-in machine.

GTP... the true Textile Partner

With over 110 years of expertise in delivering reliable weaving accessories, and more than 2000 valued customers around the globe, GTP knows how to get the best performance out of your loom in a cost-efficient manner. GTP maintains sales & service offices in the biggest textile markets worldwide.

Our GTP specialists will be pleased to discuss the challenges you are facing in your weaving application. Your nearest GTP representative can be found on www.globaltextilepartner.com or you can contact us on sales@globaltextilepartner.com for further information.
